

WHEN PLANNING A KITCHEN REMODEL, HERE ARE SOME TIPS FOR PREPARATION TO GET STARTED

We know you have been researching and preparing for your kitchen remodeling project. While it is not required to have the following action items answered before your showroom visit, jotting down some ideas will help make our first time together as productive as possible:

1. List who will use the kitchen and for what purposes. To prepare meals, entertain family and friends. Listing all the uses and users will help determine your priorities and budget and provide the information we require to meet your functional needs.
2. Measure the space (length, width and height). The size of the space will affect the initial layout ideas and estimated budget. Once you decide to move forward with your project, we will re-measure your space to ensure accuracy.
3. Take photos and videos of the kitchen and locate plans if you have them.
4. Write down what you like about the space and what you want to change so we know how to incorporate your preferences and achieve the functionality you desire.
5. Make a list of what you want to store in your kitchen and note the sizes of those items. A well-designed kitchen is an organized kitchen. Knowing this will help us develop the right storage solutions for your project.
6. Create idea books on Pinterest or Houzz identifying products and styles that you like. What are your favorite colors? Do you prefer to make a bold statement or lean towards more serene environments?
7. Prepare a list of priorities and decide how much you are comfortable spending on the project. Don't be afraid to have a budget in mind. Most clients are reluctant to talk about budgets upfront, but sharing this information helps us determine design direction, it saves time and reduces the likelihood of unexpected challenges.
8. Determine how involved you want to be in the project. Do you want to be involved in every detail or would you prefer to rely on us to develop solutions for your review and approval? Either option is fine, but it helps us save time and energy if this is communicated up front.
